Hand Wave Indoor Intercom

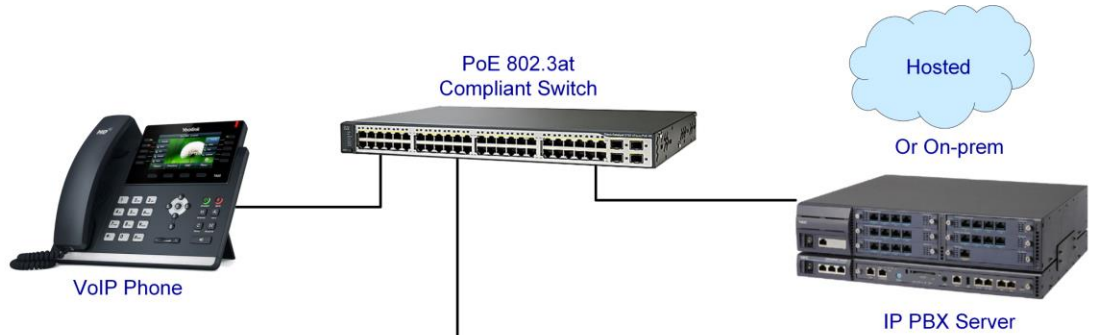

Reducing exposure to bacteria, germs or viruses is a critical concern for many organizations in today's environment. Each touchpoint can be an opportunity to spread diseases.

Maintaining an increased level of security and sterility by reducing exposure when interacting with the public is vital for the overall health and safety of any organization.

Touchless activation reduces spread of infectious diseases by decreasing that exposure.

With CyberData's new Indoor Intercoms, simply wave your hand to engage in a two-way conversation or gain entry into an office or secure environment.

Make A Call With A Wave Of The Hand

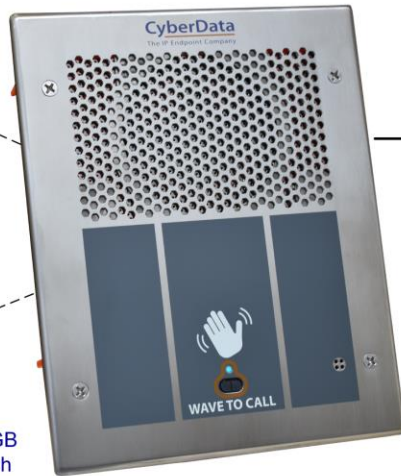

Add an Auxiliary Strobe Kit for Visual Alerting

011288 Auxiliary RGB (Multi-Color) Strobe Kit
Includes a 1 meter (3.3 ft) cable

Choose the 011490 Outdoor Auxiliary RGB (Multi-Color) Strobe Kit to match the finish of the Indoor Hand Wave Intercoms
Includes a 3 meter (9.8 ft) cable

011530 SIP Hand Wave Indoor Intercom

Direct connection to Intercom

011269 Door Strike Intermediate Relay Module

When connecting a CyberData SIP or InformaCast® Enabled Intercom to an electronic door lock, the high current side of the door strike requires a separately-wired relay and protection diode.

Network connection for added security

011375 Network Dual Door Strike Relay

CyberData's intermediate and network door strike relays eliminate the need for sourcing a separate relay and make wiring an electronic door strike easier.

- ✓ Easy-to-clean stainless steel faceplate
- ✓ Flush-mounted for lower profile
- ✓ Two SIP extensions:
 - 1) live calls/pages 2) ringer
- ✓ DTMF-controlled Dry Relay Contact for auxiliary control
- ✓ Supports internal or external Auxiliary Strobe Kit for visual notification
