Fax Server

VoiSmart®
IP Telephony & VoIP Solutions

FX-0700-01-SW02C; FX-0700-03-SW50C

The VoIP-ready business fax solution

The brand new VoiSmart FaxServer is the easiest way to manage, deliver, store, record faxes directly from end users' PC. Through a simple web interface, each user can send or receive fax, decide whether to get them via mail or not and define how and where to store them. VoiSmart FaxServer allows any organization to save money otherwise spent in cartridge, paper, expensive hardware and IT maintenance, moreover it allows increasing efficiency and productivity due to the fact that users don't have to waste time to and from fax machines and waiting to the fax to be sent.

VoiSmart FaxServer is a powerful solution for confidential documents, as each fax is addressed directly to the receiver and it cannot be missed or changed, but if some faxes need to be shared within an office, they can be addressed to specific groups. VoiSmart FaxServer can be used for direct marketing purposes by scheduling delivery time and number of attempts. The FDR functionality shows the result of the fax activity detailing the statistics and the outcome of each sending.

VoiSmart FaxServer is a powerful solution, which can manage up to 120 simultaneous faxes (depending on the hardware), with a scalable structure that easily adds fax capability to new applications and infrastructure according to the organization growth. Moreover it's fully integrated with the Voip Technology: using the T38 real time fax protocol, it guarantees an outstanding level of communication and the cost saving features of the Voip network. T.38 protocol can relay fax even on noisy and jittery lines, where standard G.711 fax passthrough fails.

Features at a Glance

- Intuitive and user friendly interface
- Full access through Web
- Multi language interface
- Unified environment customizable at single user level
- Easy setup
- Full access to Fax server set-ups and configuration
- Full FDR
- FDR data export in CSV format

Technical Features

General:

- Enterprise grade SIP and T.38 stack
- Tested with multiple commercial gateways and ATAs
- Fax speed up to 14400 bps
- FAX G3 support
- T.38 Gateway functions (under development)
- Fully Web-enabled
- Configurable at single user's level
- User, and SysAd functions integrated in the same environment
