

Algo 1203 Call Switch

Product Name: Algo 1203 Call Switch

Manufacturer: Algo

Model Number: Algo-1203

Algo 1203 Call Switch

The Algo 1203 Call Switch is a user-friendly device featuring an illuminated LED button. It is specifically designed to work seamlessly with various Algo IP speakers, IP strobe lights, or the 8301 paging adapter. Its primary purpose is to provide a convenient and programmable interface for emergency and non-emergency alerting, as well as enhancing customer service.

Algo 1203 Key Features:

- Emergency alerting and customer assistance button.
- Single gang footprint for concealed placement, if required.
- Easy to use illuminated button with flash confirmation when activated.
- Interfaces via relay input to all Algo IP speakers, IP strobe lights, and 8301 paging adapter.

By configuring the 1203 with a compatible Algo IP endpoint, pressing the button can trigger one of several actions. Firstly, it can multicast an alert or announcement, ensuring that the message reaches multiple recipients simultaneously. Alternatively, it can initiate a SIP call to a designated extension, where a discreet notification will be played upon answering the call. Lastly, the 1203 can make a SIP call to a configured extension, enabling hands-free two-way communication, such as utilising the Algo IP speaker microphone.
