The Vega 400 digital gateway connects digital telephony equipment to IP networks. All Vega 400 gateways have four E1 / T1 interfaces and can be purchased with various VoIP capacities up to 120 VoIP channels.

The Vega 400 has been designed with future expansion in mind and consists of:

ï¿1/2 Base Vega 400 unit with expansion slots

تزائد Field-installable expansion modules to provide additional VoIP channel capacity

A Vega 400 unit can therefore be installed with one VoIP channel capacity and then later additional capacity can be provisioned as and when it is needed. Each E1 / T1 interface can be independently configured as network side or terminal side. The

Vega 400 gateway can, therefore, be connected to a PBX and the PSTN simultaneously. This configuration provides:

 i_{ℓ} No disruption to the configuration of existing equipment i_{ℓ} Flexibility and choice for call routing

Open, Non-Proprietary Interfaces The Vega 400 gateway supports the following signaling schemes:
