2N SmartGate - TriEuro (900/1800/1900 MHz), remote configuration and FW upgrade via GSM (501414GB)

The 2N SmartGate - TriEuro (900/1800/1900 MHz) is an analogue GSM Gateway which does more than just save you money. It also offers an Internet connection, as well as sending and receiving FAX or SMS messages. It is compatible with all telephone exchanges that have an analogue interface. Another useful feature you will certainly appreciate is the 2N® Mobility Extension service. This service can automatically forward calls to your mobile phone, which means you will be available for business partners at any time. In addition, your mobile phone will acquire the characteristics of your fixed line and you will be able to connect calls through to colleagues if needed. The 2N SmartGate - TriEuro (900/1800/1900 MHz), unlike the EasyGate GSM gateway, has both types of analogue FXO and FXS ports, which enables connection in so-called DialThru mode. Besides money, you will also save ports on a private branch exchange and the time needed for installation. Take advantage of all the possibilities modern communication solutions offer. The analogue GSM gateway 2N® SmartGate is your way to save on costs and raise your service standard even higher.
