Draytek Vigor 2860L 3G/4G LTE & Draytek Vigor 2860L 3G/4G LTE

The Draytek Vigor 2860L 3G/4G LTE & LTE & Router features the same specification as the standard Vigor 2860 product with the addition of built-in 4G (Cellular/LTE) connectivity, compatible with all UK/Ireland cellular networks (apart from 'Relish'). The embedded 4G/LTE connectivity provides a self-contained solution as opposed to having to add external/USB modems to your router. A standard SIM slot on the back of the router is secured with a cover to prevent accidental removal (you can leave the cover off if you need easy access).

Text Message (SMS) Control & Eporting

As a cellular network device, the Vigor 2860L takes advantage of text messaging (SMS) to allow remote interrogation and control. Sending a simple command ('router status') to the router from a regular cellphone will get an instant reply telling you about the router's current status, firmware version, each WAN port's IP address, status and data volumes.

Another command ('router reboot') enables you to reboot the router remotely. For security, the commands require a password and a whitelist can allow messages only from your specified phones preventing unauthorised persons from being able to send rogue commands. See the screenshot on the right for examples.

The Vigor 2860L can also send and receive text messages from its web interface; checking incoming messages allows you to read service messages, for example that you are low on credit but it's also a quick way to type a message to anyone else's mobile phone from your web browser. The facility is also useful to confirm your credit balance (for PAYG SIMs) or to use top-up

vouchers (where these are accepted by SMS). You can also send text messages from the command line via a telnet connection - more suited for automation/integration.
